1	▼ Research phase		<div></div>																						
2	Researching the main components.		<div></div>																						
3	Checking the OWASP standards.	<div></div>	<div></div>																						
4	Review existing research and literature on password security.	<div></div>	<div></div>																						
5	▼ Overview of main existing solutions								<div></div>																
6	Research the existing solutions for password security.								<div></div>																
7	Explore the algorithms and techniques for Password Security.								<div></div>																
8	Identify areas for improvement and differentiation.								<div></div>																
9	▼ Develop a High-Level Design Document for the system.														<div></div>										
10	Create a list of functions from the user perspective.														<div></div>										
11	Create a list of functions from the system perspective.														<div></div>										
12	Create a design reference document for the system.														<div></div>										
13	▼ Develop the web application																		<div></div>						
14	Creating the structure of our web application using HTML.																		<div></div>						
15	Designing the visual appearance using CSS.																		<div></div>						
16	Write JavaScript code to handle the password security logic.																		<div></div>
